We are looking for the best

SENIOR DATA ANALYST

to support Business Area Baltic business operations

until
13.08.

OUR HOPES FOR THE BEST

Being a part of Baltic Actuaries and Insurance Data Modelling unit, you will have an important role for leading insurance data analysis towards excellence in Baltics. Your tasks will consist of leading projects to create one insurance data model for the whole Baltic company, preparing technical specifications for IT development, based on business requirements, priorities and expected results by applying LEAN approach. You'll develop data analysis tools using MS BISM and PowerBI, present reporting models and provide valuable insights to stakeholders, as well as predict, experiment and test hypotheses based on model data.

YOU ARE WHAT WE NEED IF YOU HAVE

university degree in mathematics, statistics or econometrics and at least 3-year experience in analytical or BI area. If you also have data validation, collection and presentation skills working with big data sets, ability to work as information architect for future reporting solutions, advanced knowledge in databases, SQL, MS Excel and SAS, you should consider applying for this vacancy. Of course, you need to be fluent in Latvian and English languages, as well as possess ability to take initiative and work independently, good cross-functional cooperation skills, be oriented towards solutions, effectiveness and value creation. Good knowledge of insurance and actuarial data would be considered as an advantage.

YOU WILL BE

part of modern and dynamic Baltic team in one of the leading insurance companies in Nordic & Baltic region. We will help your personal and professional development with challenging and exciting tasks. And of course we offer a good motivation package and common company benefits complemented with professional and friendly team.

**Please send your CV and application letter in English to personals@if.lv with password "Data Analyst".
